FOR IMMEDIATE RELEASE

DR. ROBERT BARD: A YEAR OF RECOGNITION FOR A LEGACY OF ACADEMIC VISION, MEDICAL INNOVATION AND ADVOCACY IN CANCER DIAGNOSTICS

6/25/2022- Having received several lifetime achievement awards in one year is indicative of the vast achievements of Dr. Robert Bard. He is celebrated in major circles for his countless clinical findings and his unending drive to advance the medical and academic communities to support integrative health sciences and the non-invasive movement.

Starting with his credentials as a cancer imaging specialist, Dr. Bard is also heavily committed to a bevy of critical roles in the future of patient care including: validation research, education in non-invasive modalities for the medical community, technical advisor to countless health organizations and a nationally recognized advocate for firefighters' safety against environmental toxic exposures. Dr. Bard attributes his

career in radiology to the US Air Force, having served in military hospitals in Thailand and Laos in the early '70's. There, he witnessed the critical demands for immediate response and real-time diagnostic technology where time and accuracy are of the ultimate essence. This started him on a multi-track life plan to help advance diagnostic technologies to endure 'battle hardened' challenges of a military hospital setting all the way to our emergency responders and the ICU of today.

5/15 - Dr. Robert L. Bard receives one of the highest achievements of his career; the prestigious ELLIS ISLAND MEDAL OF HONOR (Image Above). Alongside 2022's top American achievers, the historical Ellis Island Honors Society celebrated its 35th annual event, recognizing the most inspiring Americans who selflessly worked for the betterment of our country and its citizens.

5/22 - HISTORICAL COMMEMORATION "HONORING THE 699" – (Image R) In 2018, the First Responders' Cancer Resource (FRCR) have devoted a national advocacy mission about the many health concerns that plague the service community. With the help of Dr. Bard and his research team, they helped bring awareness about a unique and deadly historical disaster- the 1975 NY Tel Exchange Fire. Otherwise known as the '1975 plastic fire', the black smoke exhumed toxic PVC poison to all responders and throughout the neighboring residents of NYC. Dr. Bard represented the "Get Checked Now!" program and thanks to The Fire Bell Club of NY and the FDNY Fire Academy, Dr. Bard was rightfully chosen to speak at the commencement on the topic of firefighters' exposures and advanced diagnostic care and also to deliver the first honors to FF Dan Noonan, historical ambassador and 1975 fire survivor.

6/11 - In response to his national promotion of his Integrative CancerScan program and his countless educational initiatives for prevention and early detection, Dr. Bard receives the 2022 "BOLDLY FACING CANCER" Award for his array of services and contributions. In addition, Dr. Bard was nominated the major title as Chief Medical Advisor of the F.A.C.E.S. Foundation (Firefighters Against Cancer & Exposures)- a national association comprised of active and retired firefighters, cancer advocates, medical professionals, educators and patient advocates united to provide a wide range of supportive resources.

6/25 - The "ARE YOU DENSE?" Foundation honors Dr. Bard with its top achievement for his crusade against dense-breast related cancers. "Are You Dense?" is a global organization founded by the late Dr. Nancy M. Cappello, to educate the public about the impact of dense breast tissue on missed, delayed and later stage breast cancer and to increase survival in the fight against breast cancer. Dr. Bard receives this national honor at the 13th Annual Music Festival at the Palace Theater in Waterbury CT. (Image R)
